Engineer, three years in, most of it in fintech. I do my best work when I can pick something up and own it end to end, given room to decide how. My favourite work ships nothing a user will ever see and makes every engineer around me faster: build and compile times, CI, shared templates, automation, internal tooling.

EXPERIENCE

Software Development Engineer II

Jun 2026 – Present

Nium · Chennai, India

- Joined through Nium's acquisition of Cypher, continuing on payments infrastructure.

Software Engineer

Oct 2025 – Jun 2026

Cypher · Chennai, India

- Rebuilt CI/CD. Pre-commit went from unusable to 8 seconds, CI from 17 minutes to 5, tests from 10 minutes to 90 seconds. The team stopped reaching for --no-verify.
- Modernized the stack in every repo I touched: Vite for create-react-app and webpack, Bun for Node, Biome for ESLint and Prettier, viem for ethers. Installs, builds and static analysis fell from minutes to milliseconds, up to 50x in places.
- Audited the internal ledger against payment providers and closed it out, taking hundreds of thousands of inconsistencies to zero unknowns, each one categorized by root cause.
- Built the marketing site solo, from design handoff to launch. Astro, AI-scaled page generation, SEO, accessibility, LLM crawlability.

Software & Product Engineer

Dec 2024 – Sep 2025

Stealth DeFi Protocol · Remote

- Built the frontend template the company now copies into all of its frontends, and spent the time to make it something the next engineer would not curse me for.
- Shipped smart contract integrations in user-facing apps, rewrote the internal dashboard nobody asked for and everyone needed, and ran user research in Indonesia.
- Joined after contributing anonymously for two months. First remote role, so I over-communicated on purpose and nobody had to guess what I was on.

Software Engineer Intern

May 2023 – Dec 2023

Cypher Wallet (YC W22) · Chennai, India

- Owned and shipped React Native features for the mobile app, and part of the React dapp.
- Built an internal tool on Next.js 13 and set up transactional email with React Email and AWS SES.
- First Web3 role. Learned the space by working in it.

PROJECTS

andrew-dictate

Swift · macOS

2026

On-device speech-to-text for macOS. Nothing leaves the machine, and it replaces a subscription.

mojify

Go · FFmpeg

2026

Turns video into coloured ASCII and emoji. Wraps FFmpeg and yt-dlp.

quilt

TypeScript · Astro

2026

Merges the contribution graphs of several GitHub accounts into one embeddable SVG. No login.

better-splitwise

TypeScript · OCR

2026

Scans a receipt, splits the bill by item, pushes the result to Splitwise.

SKILLS

TypeScript · Go · Swift · Python · Solidity · React · React Native · Next.js · Astro · Node.js · NestJS · PostgreSQL · Redis · Docker · AWS · viem · wagmi
